

ABSTRACT

A method for recovering a liquid medium, comprising gas to be compulsorily contacted with the liquid medium to
5 gasify the liquid medium, and condensing the gasified medium, and a device for recovering a liquid medium.
Further, the present invention is directed to a device for recovering a liquid medium, wherein the device comprises: a
gasifying means for bringing gas into contact with a mixed
10 liquid comprising a liquid medium and a nonvolatile substance to gasify the liquid medium; a condensing-separating means for cooling the gas and the gasified medium fed from the gasifying means to separate the condensed medium from the separated gas; and a gas feeding
15 means for feeding the separated gas as the gas to the gasifying means.
